

## Datacenter and Enterprise Storage, Servers and Software and Virtualization

Blue Chip Tek's deep-seated partnership with Dell and real-world experience in supporting countless Dell IT implementations ensures customers have a trusted partner who fully understands how to maximize the value of your IT investments. We can help ensure your Dell storage, server, virtualization, networking, private, public and hybrid cloud systems perfectly meet your company goals, without introducing additional complexity or risk. Blue Chip Tek will advise and manage the implementation of your Dell environment, from planning to adoption and ensure integration and optimization of all of your current and legacy IT systems.

Experts at Blue Chip Tek have a proven approach. We assess your needs and compare infrastructure services from a variety of providers, help you create a sound strategy that meets your company's specific requirements, prepare your IT environment for cloud adoption, train your team, support you through every phase of the process no matter where you are in the lifecycle, and ensure you implement the best-

practices associated with unifying and managing your entire infrastructure.

With countless hours of training, you can rely on Blue Chip Tek experts to make it easy to set up best practices, optimize and make use of the options Dell provides for its customers running virtual systems, with vCPUs, memory, storage networks, IP addresses, firewalls and catalog capabilities, as well as the Dell Cloud Business software as a service (SaaS) and infrastructure as a service (IaaS) applications. Blue Chip Tek makes the integration of your legacy IT, on premise and existing cloud systems as painless, secure, and cost-efficient as possible.

Dell innovates across devices, ecosystem and services to design solutions specifically for the way people work—from award-winning thin clients, tablets and laptops to powerful workstations and rugged devices.

Dell EMC provides the foundation to help modernize, automate and transform your data center with industry-leading servers, storage, cloud computing solutions, and converged infrastructure technology.

VMware accelerates your digital transformation through software and services that let you run, manage, secure and connect all of your applications across clouds and devices.

Pivotal transforms how companies build and run software so they can innovate at start-up speed by using cutting-edge software development methodologies, a modern cloud platform, and analytics tools.

RSA delivers business-driven security so organizations of all sizes can take command of their evolving security posture in this uncertain, high-risk world.

SecureWorks develops data-driven security solutions for your organization to detect and prevent breaches and cyberattacks.

Virtustream provides cloud solutions built for the enterprise that are designed to run your most complex and critical applications with performance, security, and resilience.
